B2
31. (Amended) A method according to claim ⁴~~29~~, wherein the angle
information of the camera, which is to be stored in the storage device together with the plurality
of images, is information as to an angle where the camera is angled when the respective images
to be stored in the storage device are picked up.

REMARKS

Claims 26-31 are presented for consideration, with Claims 26 and 29 being
independent.

Editorial changes have been made to the independent claims and selected
dependent claims in order to recite Applicant's invention in non-means-plus-function language.

Claims 26-29 and 31 stand rejected on obviousness type double patenting
grounds as allegedly being unpatentable over Claim 1 of U.S. Patent No. 6,091,377. Without

conceding the propriety of this rejection, Applicant is submitting herewith a duly executed Terminal Disclaimer to overcome this rejection.

Accordingly, withdrawal of the double patenting rejection is respectfully requested.

In view of the foregoing, reconsideration and allowance of this application is deemed to be in order.

Applicants' undersigned attorney may be reached in our Washington, D.C. office by telephone at (202) 530-1010. All correspondence should continue to be directed to our below listed address.

Respectfully submitted,

MARKED-UP VERSION OF THE CLAIMS

26. (Amended) An image reproducing apparatus capable of displaying an image on a object, picked up by a camera and stored together with angle formation of the camera, on a display device, comprising:

a reproducing [means for reproducing] device to reproduce a plurality of images picked up by the camera, on the display device; and

a reproducing control [means for controlling] device to control reproduction by said reproducing [means] device so as to display a group of images picked up by the camera whose direction is a predetermined direction, among the plurality of images stored in said storage [means] device.

27. (Amended) An apparatus according to claim 26, further comprising a detecting [means for detecting] device to detect a direction of the camera and [generating] generate the direction information of the camera.

28. (Amended) An apparatus according to claim 26, wherein the angle information of the camera, which is to be stored in said storage [means] device together with the plurality of images, is information as to an angle where the camera is angled when the respective images to be stored in said storage [means] device are picked up.

29. (Amended) An image reproducing method of displaying an image of an object, picked up by a camera and stored together with angle information of the camera, on a display device, comprising the steps of:

reproducing a plurality of images picked up by the camera in a storage [means] device, on the display device; and

controlling reproduction so as to display a group of images picked up by the camera whose direction is a predetermined direction, among the plurality of images stored in the storage [means] device.

31. (Amended) A method according to claim 29, wherein the angle information of the camera, which is to be stored in the storage [means] device together with the plurality of images, is information as to an angle where the camera is angled when the respective images to be stored in the storage [means] device are picked up.
